

AGILITY DOG CLUB OF NEW SOUTH WALES INC

Extreme Weather Policy

[Adopted 10 March 2022]

The Club will not conduct, or continue to conduct, official training sessions when the ambient temperature exceeds 35 deg Celsius as measured in the shade of areas used for training on hot days.

Instructors will also use their judgement as to whether or not extreme humidity may cause excessive heat load on handlers and/or dogs, and may choose to abandon or modify training as deemed appropriate, at their discretion.

Individual handlers are also encouraged to consider their particular circumstances (handler/dog team). The handler should always feel free to withdraw from training if she/he is concerned about the effect of the prevailing conditions on their team.

The Club will let members know via the club website and social media channels of any cancellation to club training / events or club hosted competition as soon as possible.

Training will not be conducted during lightning storms.
